

Feb 1, 2013

To: Montana Wheat and Barley Committee

From: Montana State University-Bozeman Agricultural Experiment Station Research Centers located at: Conrad, Havre, Huntley, Kalispell, Moccasin and Sidney

Subject: 2012 Research Report on 'Evaluation of various materials and practices contributing toward economic crop production under flexible, continuous, and other cropping systems in Montana.'

Submitted is the 2012 Research report conducted by the Montana Experiment Stations Research Centers with funds received from the Montana Wheat and Barley Committee.

The following addendums to the original contract should be noted. There is no report for off-station barley at EARC (Il.e.i.) as there has not been one for several years at this location. When the format of this project was changed to reports for each crop, the coordinator mistakenly added this category for EARC. Additionally the durum off-station and on-station trials for EARC and NARC are contained in one report, so both links point to the same file. As in past years, the statewide spring wheat, durum, winter wheat, and barley reports are included at the end of this report as a service to the Committee.

All off-station data for winter wheat, spring wheat, and barley can be accessed using the online Variety Selection Tool at www.sarc.montana.edu.

Sincerely,

Dr. Kent A McVay, Project Coordinator
Cropping Systems Specialist
Southern Agricultural Research Center
