

Jan 15, 2014

To: Montana Wheat and Barley Committee

From: Montana State University-Bozeman Agricultural Experiment Station Research Centers located at Conrad, Havre, Huntley, Kalispell, Moccasin, and Sidney

Subject: 2013 Research report on "Evaluation of various materials and practices contributing toward economic crop production under flexible, continuous, and other cropping systems in Montana".

Submitted is the 2013 Research Report conducted by the Montana Experiment Stations Research Centers with funds received from the Montana Wheat and Barley Committee.

The following addendums to the original contract are to be noted. There is no report for "Impact of dormant seeding effects on winter wheat and spring wheat performance in south central Montana – SARC" as the plots were abandoned due to poor establishment and were not harvested. All other reports are contained within this compilation. As in past years, the statewide spring wheat, durum, and winter wheat reports are included as a service. The statewide barley report is not included as it is not complete as of this date.

All off-station and interstate data for winter wheat, spring wheat, and barley can be accessed using the online Variety Selection Tool at www.sarc.montana.edu.

Sincerely,

Dr. Kent A McVay, Project Coordinator
Extension Cropping Systems Specialist
Southern Agricultural Research Center
