SUBJECT: 1998 Agricultural Research Report

Submitted is the 1998 Report of Agricultural Research conducted by the Montana Agricultural Experiment Station at Research Centers with funds received from the Montana Wheat and Barley Committee.

The main emphasis of research, with funding assistance from the Montana Wheat and Barley Committee, is to investigate various aspects of dryland continuous and/or flexible cropping systems as compared to traditional crop-fallow systems; and the appropriateness of various materials and practices as components of cropping systems in general.

This report has been bound according to subject matter and not by location in order that the reader may more easily refer to certain aspects of the research.

All 1998 crops on-station at Southern Agricultural Research Center, Huntley were totally destroyed by severe hail. Data for Huntley off-station trials were not affected, and are included as planned.
